Data Notes

Source: NC State Demographics branch of the Office State Budget and Management

http://www.osbm.state.nc.us/ncosbm/facts_and_figures/socioeconomic_data/population_estimates.shtm

The State Demographics branch of OSBM is responsible for producing population estimates and projections. The annual **estimates of the population of North Carolina counties** and municipalities are used in the distribution of state shared revenues to local governments. **County and state population projections**, available by age, race (white/other) and sex, are used for long range planning.

To produce these estimates and projections, the unit develops and enhances complex mathematical computer models, and collects and reviews a variety of data from federal, state, and local government sources. It annually surveys North Carolina municipalities for annexation data, municipalities and counties for selected institutional data, and military bases for barracks population data. As a member of the Federal State Cooperative Program for Population Estimates (FSCPE), the unit collects and examines data for the Census Bureau and reviews Census Bureau estimates and methods.

State Demographics is committed to data dissemination through the Web. Over fifty years of annual county and state estimates and projections data are provided. The most recent **municipal estimates** are also highlighted. Additional detailed projections data are available upon request electronically or, occasionally, in paper form. A small amount of **2000 Census data** that is related to estimates and projections techniques and some **state population and growth highlights** are on this site, as well.

<http://resources.arcgis.com/content/community-analyst/about>

Community Analyst is a Web-based system that allows you to view and analyze demographic, public, and third-party sources of data to better understand the overall community in question and make better policy decisions. With Community Analyst, you can understand and compare communities more deeply and on a factual level. By using the thousands of variables available in Community Analyst, you can analyze specific locations, geographic areas, or custom regions you create on the map, then relay critical information and analyses to others via maps and reports.

Esri's business, consumer spending, and demographic data encompasses a wide variety of datasets that are updated quarterly, semiannually, annually, and decennially in the case of U.S. Census data. Esri provides current-year and five-year projections of demographic data. Several public sources of data are included in Community Analyst as well. For more details, see the Community Analyst Data Descriptions page
