

J. Douglas Galyon Depot

Work to include:

- Replacing existing lighting with high-efficiency lighting systems
- Installing a carbon dioxide (CO₂) demand-controlled ventilation system.

An Energy Awareness Program that will target Depot workers and visitors will be implemented. This campaign will educate building occupants and visitors on ways they can help reduce energy use further through simple behavior modifications.

These initiatives are projected to save about \$6,700 annually in energy costs for this building.
