

Aycock Street – Walker Avenue Pedestrian Safety Improvement Project

Public Information Workshop April 14, 2014

This project was selected for Federal funding through the Greensboro Urban Area MPO. The project will make improvements that will improve safety for pedestrians crossing through the intersection.

The improving safety is a priority with this project by reducing the width of Aycock Street north of Walker Avenue thus reducing the distance pedestrians must cross and by improving the traffic and pedestrian signals.

Please take time to provide us with your comments so that they may be properly documented. Any needed response will be provided as requested. Information pertaining to the project and from the workshop may be found at www.greensboro-nc.gov/GDOT.
